DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 21, 23-25, 27, 30, 32, and 36 are rejected under 35 U.S.C. 102(b) as being anticipated by Kryder et al U.S. Patent No. 6,011,664.

Regarding claims 21, 23-25, 27, 30, 32, and 36 the rejections applied to the claims in the previous Office action mailed July 12, 2006 are herein repeated for the same reasons (see Response to Arguments).

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claim 26 is rejected under 35 U.S.C. 103(a) as being unpatentable over Kryder et al U.S. Patent No. 6,011,664.

Regarding claim 26, the rejection applied to claim 26 in the previous Office action mailed July 12, 2006 is herein repeated for the same reasons (see Response to Arguments).

Allowable Subject Matter

5. As discussed in the previous Office action mailed July 12, 2006, claims 22, 28, 29, 31, 33-35, and 37-40 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Response to Arguments

6. Applicant's arguments filed November 6, 2006 have been fully considered but they are not persuasive. With regard to claims 21 and 30, Applicant argues that Kryder et al fail to disclose or suggest a method and apparatus for writing to magnetic media comprising producing a current in a coil wherein the current generates a magnetic write field and a high frequency magnetic field. However, the examiner respectfully disagrees since in column 6, lines 37-47 of the reference it is shown that RF generator 50 and coil 52 are positioned so as to influence the magnetization state of probe 44. Further, Kryder et al explains that the radio frequency field produced by RF generator 50 is used to switch the magnetization state of the probe. By switching the magnetization state of the probe, the probe produces a field for writing information on the magnetic medium. It is therefore considered that the current supplied to coil 52 by the RF generator 50 includes a write frequency component and a high frequency component for generating a magnetic write field and a high frequency magnetic field thus creating an area of magnetic resonance within the magnetic media. For the reasons stated above, Kryder et al meet the limitations of Applicant's invention as claimed.
